

Pursuant to announcement on March 1, 2022, this press release has been updated from the previously branded “SUPERNAP Italia” to “STACK Infrastructure,” “STACK,” or “STACK EMEA – Italy” to reflect the current branding.

STACK Infrastructure Delivers Hyperscale Data Center on Milan Campus

Overcoming global construction and supply chain constraints, STACK Infrastructure shows what’s possible in Milan.

MILAN – November 23, 2021 – STACK Infrastructure (“STACK” or the “Company”), the digital infrastructure partner to the world’s most innovative companies, today announced the opening of its second data center on its Milan (Siziano) campus. The new facility, comprised of two independent data halls, brings the Company’s active campus to 100,000 square meters and 40 MW of power.

STACK data centers enable maximum efficiency, flexibility, reliability, and security, guaranteeing zero downtime, with 24x7 access control and monitoring. The Company is also highly committed to environmental sustainability, providing 100% certified green energy to all customers and boasting a PUE (Power Usage Effectiveness) well below the industry average.

“Six years ago, we set out to develop and operate Europe’s most advanced data center. With the completion of our second facility, we’ve brought our initial investment and campus vision full circle,” said Sherif Rizkalla, CEO of STACK EMEA – Italy. “Today, we directly employ more than 50 highly talented individuals and serve some of the world’s most important hyperscale cloud providers right here in Siziano. We are proud of the incredible progress we’ve made and are committed to further investment in the region to provide our customers with runway for future growth.”

STACK chose Siziano in 2015 for the development of its Italian data center campus because of the area’s unique advantages, including easy access to major highways and railways, low seismic risk, and the ability to implement dedicated connectivity infrastructure and develop electrical substations, as well as its proximity to Milan.

As communicated earlier this year, STACK EMEA – Italy’s acquisition by IPI Partners is enabling its long-term strategy of furthering its presence in Milan and in Europe. The Company reached another milestone with the procurement of two land parcels adjacent to its existing campus, which will support three data centers totaling 35 MW of incremental capacity, bringing the Company’s total Milan capacity to 75 MW. The first of the new data centers is expected to be operational by mid-2022.

About STACK Infrastructure

STACK Infrastructure is a leading provider of digital infrastructure to scale the world’s most innovative companies. The Company delivers an extensive geographic footprint spanning the United States, Canada, Asia Pacific, and Europe, and a comprehensive suite of data center and digital infrastructure solutions, including hyperscale campuses and build-to-suit data centers (“HYPERSTACK”), immediately available wholesale colocation and private data suites (“READYSTACK”), and powered shell options (“POWERSTACK”).

The world runs on data. Data runs on STACK.

With a client-first approach, unparalleled existing capacity, and flexible expansion capacity in the leading data center markets, STACK offers the scale and geographic reach that rapidly growing hyperscale and enterprise companies need.
