

STACK Infrastructure continues Milan expansion

STACK grows its presence in Italy with the addition of a new 10MW facility and the acquisition of additional land for the expansion of its Milan campuses

Milan, ITALY — July 27, 2022 — STACK Infrastructure ("STACK"), the digital infrastructure partner to the world's most innovative companies and leading global developer and operator of data centers, today announced the opening of its third data center in Milan (Siziano). The new facility, constructed in less than 12 months on a land parcel it acquired in 2021, brings the Company's live data center capacity in Italy to 120,000 square meters (12 hectares/30 acres) and more than 50MW of power. The new facility runs on 100% renewable energy, utilizes multiple built-in energy-saving features including photovoltaic panels and heat isolation infrastructure, and prequalifies for LEED Gold certification.

In addition to its live facilities, STACK owns more than 100,000 square meters (10 hectares/25 acres) of expansion land in Siziano capable of supporting over 80MW of total power, including a new parcel in proximity to its existing campuses acquired earlier this year.

The completion of the latest Milan facility further reinforces STACK's positioning as a market leader in Italy and is part of STACK's growth strategy across the EMEA region, partnering with leading hyperscale and enterprise clients to provide flexible, best-in-class data center solutions to address their evolving requirements.

"We believe Italy's data center landscape is at the outset of a significant growth trend," said John Eland, CEO of STACK EMEA. "Our latest investment in the region is a key component to our EMEA expansion strategy and solidifies our position as our clients' trusted development and operational partner in the markets most essential to their own growth."

"As digitalization accelerates in Italy in both the public and private sectors, and as hyperscalers continue to broaden their availability, we are ever more aware of the increasing need for new capacity," explained Sherif Rizkalla, CEO of STACK EMEA – Italy. "The opening of our new facility demonstrates that STACK has once again benefitted from its solid local relationships to rapidly deliver scalable, sustainable capacity for our clients."

ABOUT STACK INFRASTRUCTURE

STACK provides digital infrastructure to scale the world's most innovative companies. With a client-first approach, STACK delivers a comprehensive suite of campus, build-to-suit, colocation, and powered shell solutions in the Americas, EMEA and APAC regions. With robust existing and flexible expansion capacity in the leading availability zones, STACK offers the scale and geographic reach that rapidly growing hyperscale and enterprise companies need. The world runs on data. And data runs on STACK.
